## Fume Arms

- 2, 3 or 4m lengths
- 150 and 200mm diameter.

### The only unit you could ever need...

The Fanquip Mobile Fume Extractor is a complete self-standing unit - simply plug it in and you are instantly collecting all dust and fumes. The unit captures welding fumes, grinding dusts, dry dusts, soldering fumes and many other airborne particles.

Fanquip Fume Extractors have exterior arm adjustments, easy hood positioning with 360 degree positioning and 700 cfm at the capture head (1250 ccm free air - no resistance). The heavy duty arm is completely obstruction free on the inside and the unit has large wheels and sturdy brakes for ease of movement and accurate positioning.

Additionally, the tough powder coated surface finish, both inside and outside, ensures that the unit can withstand the harshest of industrial environments.
