

DON'T RISK FINES OR EVEN SHUTDOWN.

DID YOU KNOW THAT THE AUSTRALIAN QUARANTINE & INSPECTION SERVICE (AQIS) CAN LEVY FINES OR EVEN SHUT DOWN YOUR FOOD PROCESSING BUSINESS FOR NOT COMPLYING WITH AIR FLOW STANDARDS?

AQIS
AUSTRALIAN
QUARANTINE
& INSPECTION
SERVICE

“

42.29.1 Where air curtains are used as a precaution against the entry of insects into buildings, the air curtains should conform to the following requirements: the air stream velocity should not be less than 8m per second, measured 900mm above the floor for overhead mounted units and across the entire opening for side mounted units.

”

In food processing businesses, air curtains are vital to creating a protection layer to keep insects and other airborne contaminants out of production areas, keeping food products free from bacteria.

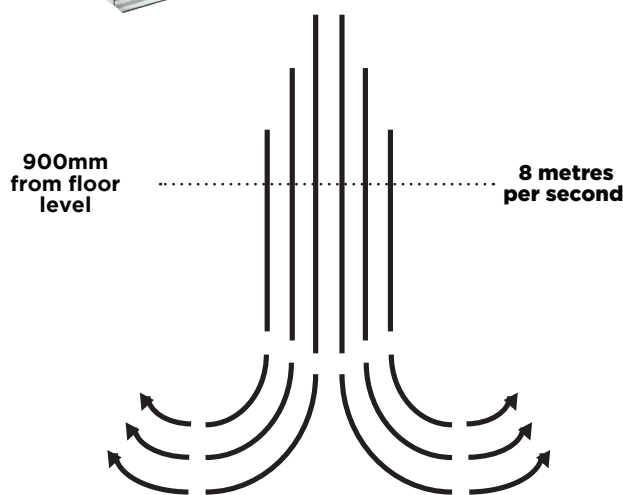

The AQIS standard requires air curtains produce a minimum air velocity of 8 metres per second at 900mm above the floor level and failure to meet this standard can result in significant fines or even the closure of your food processing operations.

AQIS do carry out audits on compliance and have recently increased vigilance in ensuring food processing businesses not only have air curtains installed, but that they are actually meeting the required specification.

Don't risk your ability to operate by installing equipment with unknown performance.

Fanquip can provide you with technical advice and a cost-effective solution to quickly achieve compliance using our range of tested and trusted air curtains.

FANQUIP
VENTILATION SOLUTIONS

HEAVY DUTY AUSTRALIAN MADE AIR CURTAINS.

DESCRIPTION.

Fanquip air curtains are designed to provide a high speed curtain of air in front of doorways and entrances and importantly, help food processing operations comply with relevant AQIS standards. The new range of Fanquip air curtains has been designed to give increased performance and longer service life.

APPLICATION.

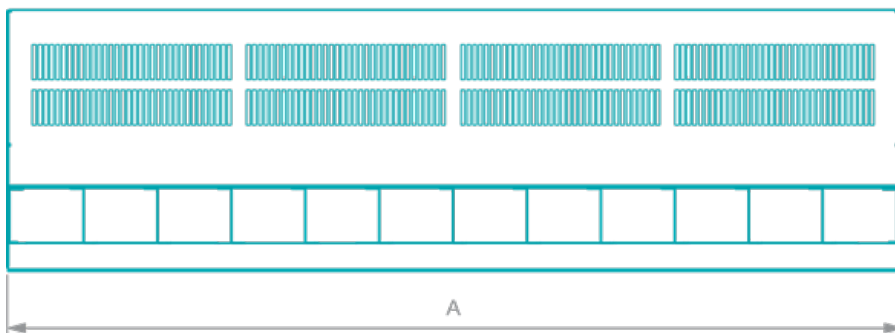

Primarily used in abattoirs, food processing plants and storage industry. Emits a strong curtain of air in front of entrances to block out dust, odours and insects entry. The air curtain is also used on walk-in refrigerators to stop cold air emission.

FEATURES.

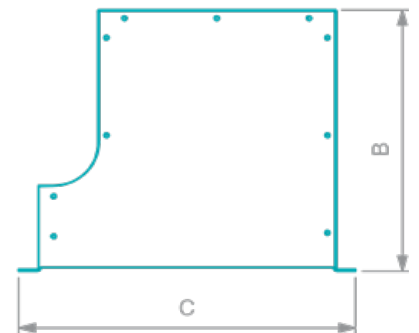

Added features of this superior air curtain are:

- Direct Drive
- IP56 rated
- AQIS standard
- Australian made
- Available in 900mm, 1200mm & 1500mm wide
- High velocity
- Low maintenance
- 240V or 415V
- Stainless steel construction

MODEL NUMBER	SIZE	MOTOR SPEED (RPM)	MOTOR POWER (KW)	VOLTAGE (V)	CONSTRUCTION
13-15091 or 3	900	1440	0.75	240/415	Stainless Steel
13-15121 or 3	1200	1440	1.5	240/415	Stainless Steel
13-15151 or 3	1500	1440	2.2	240/415	Stainless Steel
